The H2020 Valuwaste project coordinated by CETENMA is launched – 20.11.2018

In November 20 and 21, the VALUEWASTE project's kick-off meeting took place. VALUEWASTE is an ambitious project aimed at maximizing the recovery of resources from organic waste generated in cities and municipalities.

The meeting was organized by CETENMA – Technological Centre for Energy and the Environment, coordinator of VALUEWASTE. For 2 days, the consortium's 17 partners got together to prepare the first steps of the project's execution, as well as to meet those who will be companions in this initiative for the next 4 years.

TETma and CENTREVerd continue their commitment to improve the environment with the BIO LIGWASTE Project – 12.12.2018

In a project funded by the European Regional Development Fund and the State Research, Development and Innovation Program of the Ministry of Economy under the call Challenges-Collaboration 2016, TETma (coordinator of the LIFE Waste2Biofuel project) and CENTREVerd continue their commitment to improve our environment. The BIO LIGWASTE project began in 2016, having as the main objective to evaluate the technical-economic viability of the use of the waste generated following the cleaning of parks and gardens to produce bioethanol and bioproducts, determining the optimum operating conditions for each of the stages that constitute the process.
